SUMMARY: Full-stack Engineer (Typescript) with 6 years of experience building web, mobile, and desktop apps. Owned complex frontend, backend, and cloud systems end-to-end, working directly with leads & designers. I am skilled at rapidly diagnosing production issues, and have launched multiple revenue-generating AI SaaS.

EXPERIENCE:

Pharmora (Remote, US) - Full-stack & LLM Engineer March, 2025 - Present

- Engineered three mobile apps for customer orders, dispatch riders, and vendors, using React Native(Expo), and built admin panel with React.js and Typescript, supporting 5000+ real-time inventory SKUs.
- Owned the deployment of entire infrastructure on AWS handling 9,000+ weekly order events, via EC2 + Coolify, Redis, Cloudinary, and Vercel, and contributed to the design of end-to-end event based logistics microservices that reduced order processing latency by ~30%.
- Co-architected scalable NestJS backend for real-time orders/payments with PostgreSQL DB, integrating multi-agent LLM orchestration API for automated actions, that drove an 18% increase in cart conversions.

Inkspiff (Remote, US) - Principal Full-stack Engineer May, 2023 - February, 2025

- Collaborated with designers to engineer AI SaaS platform that documents large codebases in <60 seconds using GitHub webhooks, Node.js LLM pipelines, Next.js/Typescript with update streaming via WebSocket.
- Integrated real-time collaborative editing with CRDT (Y.js + Codemirror) to sync versions across distributed teams on every keystroke for zero conflicts, which boosted avg. session duration to 25 minutes (+5x).
- Managed self-hosting of code infra processing 350,000+ daily requests on AWS EC2 with Coolify + Docker, S3, Prisma, and a RBAC PostgreSQL, which supports users at scale and saved ~70% on cloud costs.

Shoppverse (Remote, Nigeria) - Frontend Developer June, 2022 - June, 2023

- Built a web3 e-commerce marketplace with Next.js, Ethers.js, and Solidity facilitating crypto purchases for over 1000 users, and added an escrow wallet with idempotent processing, reducing failed orders by ~30%.
- Worked with a remote design and product team to translate design specs into pixel-perfect UI and developed waitlist site using React, Typescript, and Firebase that captured 250+ launch leads per month.

Roar Nigeria (Onsite, Enugu) - Frontend Web & AI Intern November, 2021 - May, 2022

- Engineered a Slack-style real-time team based communication app using React, Typescript, and Socket.io, tested at an accelerator to increase team operational efficiency by 50% by cutting decision latency.
- Led fellow interns in a 40-day paired coding challenge in Python, and ML libraries that added at least 2 new core technical proficiencies to each participant and improved collaboration and delivery cadence.

Guide To Phone... (Remote, Abuja) - Software Developer (Web) March, 2020 - October, 2021

- Maintained websites for high-traffic media content, ensuring RWD and fast load times for an 800,000+ user base, with React.js, Javascript, and Rest APIs, and presented demos/updates to non-technical stakeholders.

PROJECTS:

VELIN AI (MacOs, Windows & Web) - Invisible meetings AI – Solo-built real-time meetings AI app superior to InterviewCoder with Electron, C++ add-ons, React + Tailwind, CI/CD, and Supabase, currently at \$840 MRR.

INCLUDDA.COM (4 Web Apps) - Healthcare supply chain infra – Developed frontend of four web apps for medical-equipment supply and insurance, using Next.js, TypeScript, Redux, Tailwind, Axios. (April, 2025)

POPLA (Appstore & Playstore) - Join live DJ Sessions/Parties – Worked with a remote team and built entire frontend of the mobile app using location services with React Native, Typescript. (February, 2022)

SKILLS:

Languages/Frameworks: Typescript, React, Next.js, React Native, Node.js, JavaScript, Material UI, HTML, Tailwind, CSS, Redux, Tanstack, Electron, PostgreSQL, NestJS, Git, GraphQL, SQL, Python, FastAPI, C++, Redis, Express, Ethers.js, Vue.

Technologies/Tools: LLMs, Web Sockets, Restful APIs, AWS (EC2, EBS, RDS, IAM, S3...), GCP, MongoDB, Firebase, Supabase, AI Agents, Strapi, Sanity, MongoDB, NginX/Caddy, Docker, PostHog, Cypress, Jest, Sentry, Vercel, MCPs.

Concepts: Auth, Architecture, Testing, Observability/Monitoring, Data Structures, Agile/Scrum, Deployment, UI/UX, SEO, Cross Platform, Debugging, CI/CD, Prompt, Microservices, Documentation, CDN, Cache, CMS, ORMs, Responsive Design, Scalability, Performance Optimization, Database Management(SQL/NoSQL), Automation, AI Tools (Claude...), Analytics.

EDUCATION:

University of Nigeria

B.Eng in Electrical Engineering - 2017 - 2024.

ALX Africa Program

Software Engineering - February, 2022 - June, 2022.

AWARDS/ACHIEVEMENTS:

- Winner: Kiros Code Competition - June, 2024.
- 2nd place: Blockchain UNN Hack - April, 2023.
- Winner: Bunzz Developer Hack - February, 2023.
- Winner: Blockchain Hub Africa Hack - May, 2022.
